

# PROGRAM & PROJECT MANAGEMENT

## Program Management

CALTRIP's comprehensive Program Management services will help you keep multiple, interrelated projects in sync, on time and within budget. We help owners and others reduce the uncertainty and risk in their capital programs. Our experienced professionals and technical resources work with clients to define, plan, implement and integrate every aspect of each project.

Our program managers review every detail of all projects: strategic benefits, coordinated planning, shared resources, interdependencies and pacing. Our management objective is to keep the program moving forward efficiently and on target to achieve your scope, cost, schedule, serviceability and safety goals. When managing an entire multi-disciplinary program, our service improves timing and quality, which ultimately saves you money.

## Project Management

CALTRIP offers extensive Project Management services to both public agencies and private owners. Whatever type of infrastructure project is required, we can help you manage total project delivery that also satisfies stakeholder needs and expectations.

Our project managers have managed all phases of project delivery from project initiation through closeout. We specialize in providing scope / cost / schedule management, development of project management plan documentation (risk, communication, quality, human resource and procurement plans), as well as training, per Project Management Institute (PMI) standards. Depending on the requirements of your project, we will customize the solution that works best for you, then manage even the smallest of details.
